

Opel Vectra B, Astra G, Corsa C, Agila from model year 2001 Engine codes: Y26SE, Z12XE, Z10XE, Z20LET

Fault code P1600 stored in the engine control unit.

If it is found with these vehicles that fault code P1600 is stored in the engine control unit, an outdated software status could be the possible cause.

If this fault is stored, there may not be any complaint by the customer. The vehicle driving behaviour is not impaired, and the engine warning light stays off.

To eliminate the problem the control unit does not have to be replaced; more recent software simply needs to be installed.
