Service reset

In the case of these vehicles, in order to reset the message “Service due” in the SID (**S**aab **I**nformation **D**isplay) after a service, this can be carried out using a suitable diagnostics device or via the buttons on the display.

In order to carry out the reset via the button combination, proceed as follows:

- Press the “Clear” button once.
- Press the “Clear” button again and keep it held for 8 seconds. The “SID” will give a short audible signal. Another signal is then given shortly afterwards, and the message “Service” will appear in the display.
- Start the engine and check if the message is confirmed.
