### Airbag control light flashing

If the airbag control light is flashing four times at this vehicle it is possible that the wiring harness – airbag under the driver seat is not correctly routed. When the wiring harness is not correctly routed, it pulled to strongly on the plug. To check the wiring harness carry out the following steps:

1. Put the driver seat into the forward most position
2. Remove the two clamps of the wiring harness cover
3. Check the routing of the wiring harness - airbag, be sure that the clip holds the wiring harness in the right position, if necessary correct it.
4. Inspect the plug for damage and unconstrained fitment
5. Fit the wiring harness cover, pay attention that the both clamps are engaged.
