

Opel Astra G **Model year: 1998 – 2000** **With engine: X16SZR**

Start-up problems / engine stalls **Various fault codes**

If there should be start-up problems with the above-mentioned vehicles and/or the engine should stall and various fault codes are stored at the same time, the engine control unit could be the cause of the problem. Corrosion in the control unit can lead to the above-mentioned faults. The problem can affect control units with codes 8001 to 9342. These must be replaced unless they are marked "Remanufactured". The ID code is made up of the first 4 digits after the combination of letters on the control unit label.
