

## **Opel Astra G 2.0-diesel engine**

### **Odometer does not show any figures**

In the case of Astra G models with a 2.0-litre diesel engine, the odometer can malfunction in such a way that the speed display and the trip meter work correctly but the overall mileage is no longer displayed, or only dashes are displayed.

In this case, the fault often does not lie with the instrument unit, and replacement does not therefore need to be carried out.

The following sequence should be observed:

1. Switch off the ignition
2. Remove fuse F22 and wait at least five minutes
3. Plug in the fuse again and switch on the ignition

After a brief flashing of the display, the mileage digits reappear.
