

## Plug adaptor-Trailer hitch

### Rear fog light not working

If the towing cable connections on the vehicle is fitted with a switchable connection (Fig 1) and a connector adapter is used, then ensure, that the adapter is disconnected after towing (Fig 2). If not, then the fog light of the vehicle will not work, this of course could be dangerous on foggy days. During inspection or lighting check (without trailer), ensure that the adapter is disconnected.
